1 Introduction

This is a LaTeX package that provides labels for chapters, sections, subsections, and topic headings that are "in the weeds", a.k.a. tangential, off-topic, or esoteric. For example, if you were making a textbook, you may want students to skip certain sections unless they were curious.

Thanks to OpenAI Prism L^AT_EX vibe-coding and research application.

Use `\weedsection[1]{Title}`, `\weedsection[2]{Title}`, or `\weedsection[3]{Title}` to mark tangential sections. The portable package also provides `\weedsubsection`, `\weedchapter`, and `\weedspecial[<level>]{<topic>}`.

You can also use these one-argument shortcuts:

- Sections: `\weedysection`, `\weediersection`, and `\weediestsection`
- Subsections: `\weedysubsection`, `\weediersubsection`, and `\weediestsubsection`
- Topics: `\weedytopic`, `\weediertopic`, and `\weediesttopic`

2 Slightly Tangential Topic 🌿

This heading is marked as slightly in the weeds.

3 More Technical Digression 🌿🌿

This heading is marked as in the weeds.

4 Deep Implementation Detail 🌿🌿🌿

This heading is marked as deep in the weeds.
